Habanero-C++

Habanero-C++ is a compiler-free work-stealing library (under development), which supports Habanero-C work-stealing constructs. Habanero-C++ makes heavy use of C++11 lambda functions in its APIs. C++11 lambdas avoid the need for compiler support while still retaining the syntactic convenience of language-based approaches.

A detailed overview of Habanero-C++ can be found here.
