Errata in the Comp 211: Midterm Examination

The exam includes the following errata.

1. In the synopsis of the Scheme language used in the exam, the recognizer predicate named `rational` should have been named `rational?`.

2. In Problem 1 item 4, the Scheme expression is missing a closed parenthesis. You will get 1 point credit for correctly inserting the missing parenthesis.

3. In Problem 4, the type given in the contract for `fold` should be `(A B -> B)` not `(A -> B)` as written.
