What would happen if the end-finish operation from slide 11 was moved from line 13 to line 11 as shown below?

```
1. finish() -> {
2.    int numThreads = 4;
3.    int numberOfHops = 10;
4.    ThreadRingActor[] ring = new ThreadRingActor[numThreads];
5.    for(int i=numThreads-1; i>=0; i--) {
6.        ring[i] = new ThreadRingActor(i);
7.        ring[i].start();
8.        if (i < numThreads - 1) {
9.            ring[i].nextActor(ring[i + 1]);
10.        } }
11. }); // finish
12. ring[numThreads-1].nextActor(ring[0]);
13. ring[0].send(numberOfHops);
```
