

## Small Classroom Quick Reference Guide

- You will want to first tap the touch panel located at or near the podium to wake it up.
- Turn **on** the projector and select the Projector setup (if more than one) that you plan to use for your class.
- Select **PC computer** as your source. You **must** select this as it controls all of the monitors, mics, etc. in the room. Even if you plan to use a laptop, you must turn on the PC computer in the room and launch Zoom from it.
- **IMPORTANT: you must log into the computer next before you select anything further on the touch panel.** (We recommend NetID and password)
- Once the PC has been logged in press **Enable Extended Screens** on the touch panel.

- On the PC, login into Zoom either through the Zoom icon on the desktop or through your Canvas course.
- If you login to Zoom through the app, make sure to login via SSO.
- Launch your meeting for your class.
- Select the camera you wish to use by clicking on the arrow next to Video in Zoom. The selection in the smaller rooms is **Logi Rally Camera**.

The other option is the small webcam located on the top of each podium monitor. This can be used to turn to the audience to show the students if you wish. Just select the **Logitech HD Webcam** as the video display.

**NOTE: the view from the selected camera will be what your remote students will see for you in Zoom.**

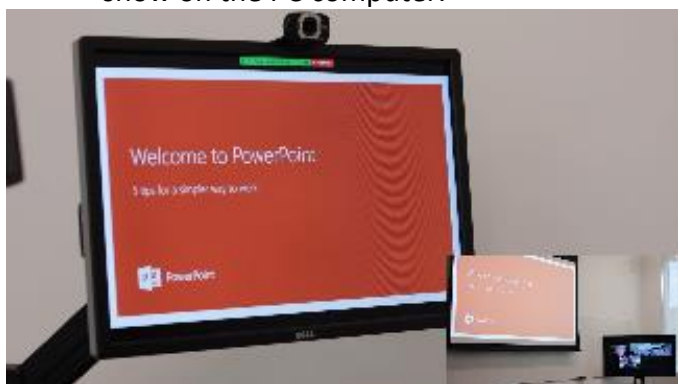

- The smaller rooms with the Logi Rally Camera will have a handheld remote control to control the camera.

If using the Logitech Rally System, the following controls will be on the square remote that will allow you to:

1. Select Camera Presets
2. Pan (Left/Right), Tilt (Up/Down)
3. Zoom (In/Out)
4. Mute Microphone
5. Volume Control (use the controls on the touch panel and not on this remote)

- As participants enter the Zoom meeting, they will appear on the podium monitor and projector display. You will be able to see the gallery view of your students.
- If you plan to show PowerPoint, launch it (if you already haven't) and then **Share Screen** from within Zoom and select **Screen 1**. Your gallery view of students will move to the extended monitor on the cart so you can view them, and PowerPoint or the other application will now show on the PC computer.

If you wish to use the document camera, click **Share Screen**, select the **Advanced** tab, and then **Content from 2<sup>nd</sup> Camera**. **Important:** to toggle between the camera feeds, click the Switch Camera icon in the upper left of the screen.

**IMPORTANT EXCEPTION:** If you are not sharing a screen or using PowerPoint (perhaps using the board) and wish to have the Zoom gallery view display on the extended monitor, manually drag it there.

When you are finished, please click the **Log Off PC** button. This will make sure that settings for the monitors, etc. are preserved for the next instructor.
