Make your bed	
Clean out your fridge	
Buy food supplies and store	them in fridge
<pre>// Run two loads of laundry {</pre>	
Run load 1 in washer	
Run load 2 in washer	
Run load 1 in dryer	
Run load 2 in dryer	
}	
Call your family	

Post on Facebook that you're done with all your tasks!

2) Parallelizing Matrix Multiply

Consider the sequential version of a matrix-multiply algorithm shown below that computes the product of two NxN matrices A and B into an NxN matrix C, assuming that all entries in C were initialized to zeros. (Matrices are represented as 2D arrays in Java.)

Insert async and finish pseudocode annotations to maximize parallelism, while ensuring that the parallel version always computes the same result as the sequential version. Pay attention to the scoping of the async and finish constructs.

```
for (int i = 0 ; i < N ; i++) {
  for (int j = 0 ; j < N ; j++) {
    for (int k = 0 ; k < N ; k++) {
        C[i][j] = C[i][j] + A[i][k] * B[k][j];
      } // for-k
    } // for-i
    . . . // Print matrix C</pre>
```
