

# Worksheet: RecursiveAction Computation Graph

---

- 1) Consider the compute method on slide 8. Let us suppose we supply it with an 8 element array with values [0,1,2,3,4,5,6,7] and THRESHOLD value of 2. Draw a computation graph corresponding to a call to compute with the appropriate fork and join edges.
- 2) Define each direct (sequential) computation as 2 units of work and each recursive call as one unit of work.

What is the total work? What is the critical path length?
