## Worksheet: impact of distribution on parallel completion time

- 1. public void sampleKernel(
- int iterations, int numChunks, Distribution dist) { 2.
- for (int iter = 0; iter < iterations; iter++) { 3.

```
finish(() \rightarrow \{
4.
```

- for (0, numChunks 1, (jj) -> { 5.
- 6. asyncAt(dist.get(jj), () -> {
- 7. doWork(jj);
- // Assume that time to process chunk jj = jj units 8.
- 9. });
- }); 10.
- 11. **});**
- 12. } // for iter
- 13. } // sample kernel

 Assume an execution with n places, each place with one worker thread • Will a block or cyclic distribution for dist have a smaller abstract completion time, assuming one worker per place?

COMP 322, Spring 2024 (M.Joyner)
