## Worksheet \#10: RecursiveAction Computation Graph

Name: $\qquad$ Net ID: $\qquad$

1) Consider the compute method on slide 9 . Let us suppose we supply it with an 8 element array with values [ $0,1,2,3,4,5,6,7$ ] and THRESHOLD value of 2. Draw a computation graph corresponding to a call to compute with the appropriate fork and join edges.
2) Define each direct (sequential) computation as 2 units of work and each recursive subdivision as one unit of work.

What is the total work?
What is the critical path length?
