

# Worksheet: Abstract Metrics with Object-based Isolated Constructs

Compute the *WORK* and *CPL* for this program with an object-based isolated construct. Indicate if your answer depends on the execution order of isolated constructs. Since there may be multiple possible computation graphs (based on serialization edges), try and pick the worst-case *CPL* value across all computation graphs.

```
1.  finish() -> {
2.      // Assume X is an array of distinct objects
3.      for (int i = 0; i < 5; i++) {
4.          async() -> {
5.              doWork(2);
6.              isolated(X[i], X[i+1],
7.                  () -> { doWork(1); });
8.              doWork(2);
9.          }; // async
10.     } // for
11. }; // finish
```

Answer: *WORK* = 25, *CPL* = 7.
