

Worksheet: Events with Data Driven Tasks

A logged in user would like to get the articles they authored using the `getArticles(userId)` request to fetch their articles. The request returns an object that has a list of articles that looks like the following:

```
{ articles: ["I like Rice", "Where are they putting the 12th college"] }
```

Can you modify the code on the next slide to safely get the user's articles? If not, explain why not.

Get Articles for logged in users with DDTs

```
var username = ...  
var password = ...  
...  
var regUser = newDataDrivenFuture();  
var logUser = newDataDrivenFuture();  
var loggedIn = newDataDrivenFuture();  
var logOut = newDataDrivenFuture();  
...  
async(() -> regUser.put(registerNewUser(username, password))); // { username: user, result: "success" or "failure"}  
...  
asyncAwait(regUser, () -> { if (regUser.safeGet().result.equals("success"))  
    logUser.put(loginUser(username, password)); // {userId: id, result: "success" or "failure"}  
  else  
    logUser.put({result: "failure"});    });  
...  
asyncAwait(logUser, () -> { if (logUser.safeGet().result.equals("success"))  
    loggedIn.put(isLoggedIn(logUser.safeGet().userId)); // {userId: id, result: "success" or "failure" }  
  else  
    loggedIn.put({result: "failure"});    );  
...  
asyncAwait(loggedIn, () -> { if (loggedIn.safeGet().result.equals("success"))  
    logOut.put(logoutUser(loggedIn.safeGet().userId)); // { result: "success" or "failure" }  
  else  
    logOut.put({result: "failure"});    );  
...
```

Get Articles for logged in users with DDTs

```
var username = ...  
var password = ...  
var regUser = newDataDrivenFuture();  
var logUser = newDataDrivenFuture();  
var loggedIn = newDataDrivenFuture();  
var logOut = newDataDrivenFuture();  
var articles = newDataDrivenFuture();  
...  
async((() -> regUser.put(registerNewUser(username, password))); // { username: user, result: "success" or "failure"}  
...  
asyncAwait(regUser, () -> { if (regUser.safeGet().result.equals("success"))  
    logUser.put(loginUser(username, password)); // {userId: id, result: "success" or "failure"}  
    else  
    logUser.put({result: "failure" });});  
...  
asyncAwait(logUser, () -> { if (logUser.safeGet().result.equals("success"))  
    loggedIn.put(isLoggedIn(logUser.safeGet().userId)); // {userId: id, result: "success" or "failure" }  
    else  
    loggedIn.put({result: "failure" });});  
...  
asyncAwait(loggedIn, () -> { if (loggedIn.safeGet().result.equals("success"))  
    logOut.put(logoutUser(loggedIn.safeGet().userId)); // { result: "success" or "failure" }  
    else  
    logOut.put({result: "failure" });});  
...  
asyncAwait(loggedIn, () -> { if (loggedIn.safeGet().result.equals("success"))  
    articles.put(getArticles(loggedIn.safeGet().userId)); // { articles: ["a1", "a2", "a3"] }  
    else  
    articles.put({articles: [] });});  
...
```

Worksheet solution

```
var username = ...
var password = ...
var session = -1;
var regUser = newDataDrivenFuture();
var logUser = newDataDrivenFuture();
var loggedIn = newDataDrivenFuture();
var logOut = newDataDrivenFuture();
var articles = newDataDrivenFuture();
...
async(() -> regUser.put(registerNewUser(username, password))); // { username: user, result: "success" or "failure"}
...
asyncAwait(regUser, () -> { if (regUser.safeGet().result.equals("success"))
    logUser.put(loginUser(username, password)); // {userId: id, result: "success" or "failure"}
  else
    logUser.put({result: "failure"});  });
...
asyncAwait(logUser, () -> { if (logUser.safeGet().result.equals("success"))
    session = logUser.safeGet().userId; loggedIn.put(isLoggedIn(session));// {userId: id, result: "success" or "failure" }
  else
    loggedIn.put({result: "failure"});  });
...
asyncAwait(loggedIn, () -> { if (loggedIn.safeGet().result.equals("success"))
    logOut.put(logoutUser(session)); session = -1; // { result: "success" or "failure" }
  else
    logOut.put({result: "failure"});  });
...
asyncAwait(loggedIn, () -> { if (loggedIn.safeGet().result.equals("success") && session != -1)
    articles.put(getArticles(session)); // { articles: ["a1", "a2", "a3"] }
  else
    articles.put({articles: []});  });
...

```
