Run a second chromium browser?

Chromium browser does not give a graphic interface where user can create a second profile, but you can do it from command line by giving it option --user-data-dir, for example

```bash
chromium-browser --user-data-dir='~/.config/chromium2'
```

In Ubuntu or Debian system the default user-data-dir for Chromium browser is `~/.config/chromium`

You can also add another launcher to panel besides the original Chromium Browser Icon, and modify the command property to

```bash
/usr/bin/chromium-browser --user-data-dir='.config/chromium2' %U
```

⚠️ This time use `.config/chromium2` but not `~/.config/chromium2`, otherwise it will create a ~ folder in your home directory!
