MySQL5.1 on Ubuntu 10.10 installation log

Start Synaptic Package Manager
Install **mysql-server** and all required packages.
During the installation, debconf tool will ask you to decide the password of MySQL "root" user.

Install **phpmyadmin** and all required packages.
During the installation, debconf tool will ask you to decide which web server to reconfigure automatically: apache2/lighttpd (I checked both)

Configure database for phpmyadmin with dbconfig-common? Yes

After installation, you can access your database from browser [http://localhost/phpmyadmin/](http://localhost/phpmyadmin/)
