

Processes

This section should have child pages about processes that happen at the OEDK. Processes should involve some of the tools or resources in the OEDK, the process page should not go into detail about using a particular tool. Should you find your process page starts to contain too much information about the tool itself, please move that information to the respective tool page.

Ideological Example: The laser cutter. Showing how to make a project box with weaving edges is a PROCESS that uses the TOOL "laser cutter".

This keeps the page on the TOOL "laser cutter" shorter without having to sacrifice the very useful knowledge of making specific things (aka processes).

Chemical Processes

Electronic Processes
