211SubmissionGuidelines

Scheme Homework submission checklist

Please go over these instructions carefully before submitting **each** homework.
Keep in mind that they may be updated between homeworks.

The file that you submit

- Make sure that you have followed the Scheme Homework Guide in writing your problem solutions.
- Include header comments at the beginning your Scheme (**.ss**) file. Recall that you should only submit one file that is a legal Scheme program. The header and answers to expository questions should be formatted as comments (either as Scheme comment boxes or semi-colon tagged comments).
  The header should contain:
  - the assignment number,
  - your name **and** email address, and
  - your partner's name **and** email address.
- Check that your submitted programs run correctly in DrScheme. By using check-expect for testing, you can simply run your entire homework file. If you have constructed thorough test suites, DrScheme will report any errors as failed tests.
- You can refer to data and function definitions from previous problems without redefining them.
- Any non-primitive data type that you use in your function contracts must be documented (at least once) by a definition written as a comment in your file. The definition must occur before that form of data is used in program code.
- Make sure that your submit **one**, **text-formatted (.ss)** file for all the required problems. By **text-formatted** we mean a regular text file--not a DrScheme editor file. To create such a file, you can use the **Save Definitions as Text** command located in the submenu titled **Save Other** in the **File** menu.

Submitting your homework

To submit your homework, please use OwlSpace. You can simply write "See attached" in the submission box, attach the **.ss** file described above, and hit the submit button.
