

SummarizeMCMCResults

Description

Convert the log file generated by our MCMC sampling method to be readable by Tracer.

PhyloNet Version: 3.6.3

Usage

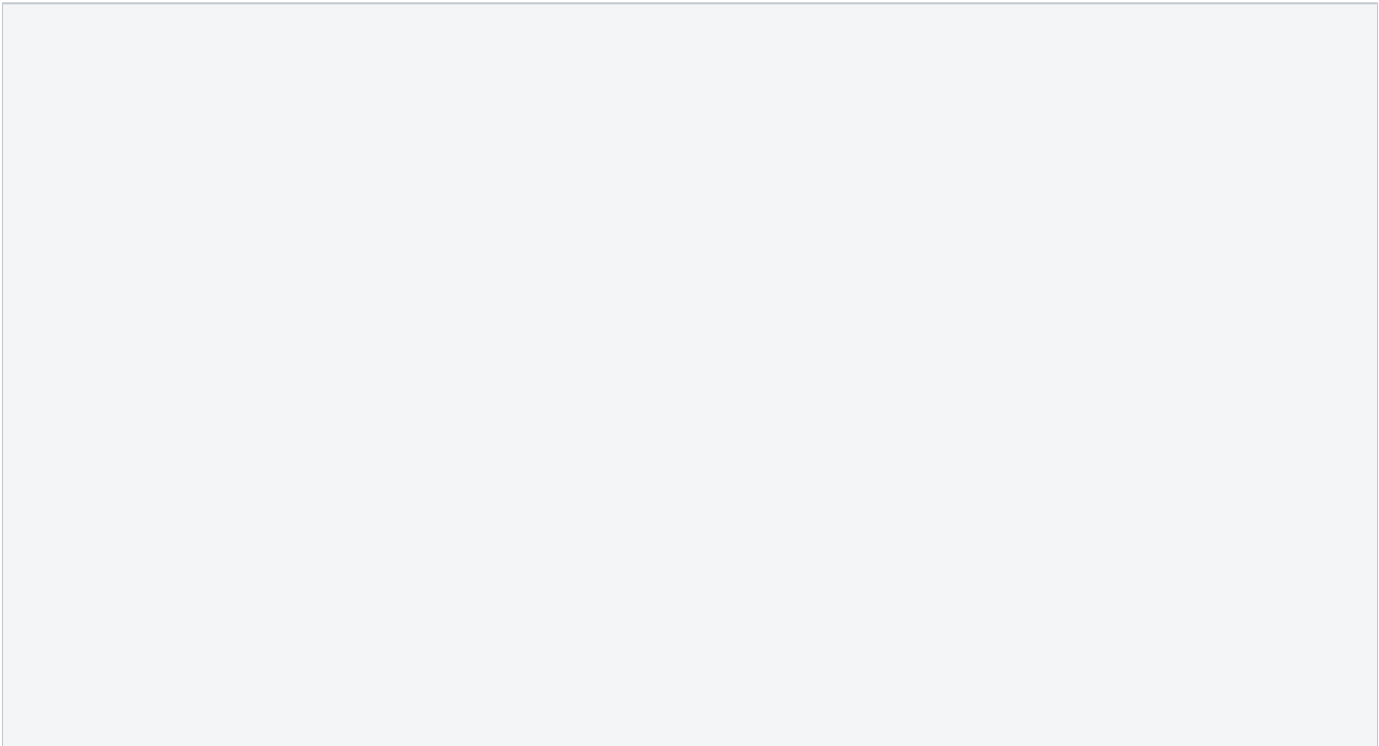

`SummarizeMCMCResults -mode "Tracer" [-cl chainLength] [-bl burnInLength] [-sf sampleFrequency] [-outfile filename] [-truenet networkString]`

Settings		
-cl <i>chainLength</i>	The length of the MCMC chain. Set to the same value used in MCMC_SEQ.	required
-bl <i>burnInLength</i>	The number of iterations in burn-in period. Set to the same value used in MCMC_SEQ.	required
-sf <i>sampleFrequency</i>	The sample frequency. Set to the same value used in MCMC_SEQ.	required
-outfile <i>filename</i>	The name of tracer log file you want to generate. Can contain path.	required
-truenet <i>networkString</i>	The network you want to summarize its parameters.	required

Example

If we run [MCMCseq_example1.nex](#) , which is one of the example in the description of command MCMC_SEQ, we will get following output. Suppose it is printed into file example_mcmcseq_1.out.

Then the content of example_mcmcseq_1.out looks like:

MCMC_SEQ -cl 50000 -bl 10000 -sgt (gt0, gt1) -snet (net1) -sps 0.04 -pre 20

Output files under /Users/zhujiayan

SET_POP_SIZE_MEAN = 0.046099144360160785

SET_POP_SIZE_WINDOW_SIZE = 0.0023049572180080394

SET_TIME_WINDOW_SIZE = 0.0025150755969370955

Suppose we want to analyze the parameters of sampled top network using Tracer, we can write such a NEXUS file. Note that the "truenet" string is copied from the "Rank = 0" network. And remember to put the log file into SETS section.

```

#NEXUS

BEGIN SETS;
/Users/zhujiafan/Documents/BioinfoData/Report/example_mcmcseq_1.out
END;

BEGIN PHYLONET;
SummarizeMCMCResults -cl 50000 -bl 10000 -sf 5000
-mode "Tracer"
-outfile "/Users/zhujiafan/Documents/BioinfoData/Report/report.txt"
-truenet "(((B:0.005849707761867801,C:0.005849707761867801)I2:0.07841641875267599,(A:0.01271426487814302)I3#H1:
0.07155186163640077::0.8622136520013726)I1:4.6994134208375336,I3#H1:4.770965282473934::0.13778634799862743)I0; ";
END;

```

Run this NEXUS file using PhyloNet. PhyloNet will print a string showing how nodes are labeled, and report.txt is generated, which is readable by Tracer.

Following is what we will see after import report.txt into Tracer. In the column of Statistic, gamma represents inheritance probability, tau represents branch length, and theta represents population mutation rate.
