Developers - What's your favourite editor when using Windows?

ConText, my previous editor of choice, burnt me when I discovered that its 'Search backwards' function doesn't always find matches. Now I'm searching for a new file editor to do my Confluence support in.

Are there any decent Windows-based editors that you would recommend, or is Cygwin Vim the undisputed king?

I'll be using it for log trawling and editing XML, VM and Java property files. The ability to filter text (eg show only lines containing SEVERE) would be useful, as would colour highlighting for XML and HTML. Also Id like something that won't choke on gigabytes of text.

If anyone has any suggestions, just let me know.
