Canvas help

FAQs

Do I need to setup a Zoom meeting for each one of my classes I'm teaching?

Yes, you will want to go into Canvas and create the links in there. This way they will be available within your Canvas course for all your students to access and you won't need to send it to your students. For info on creating these meetings within Canvas, click [here](#).

Do I need to record my class sessions?

Yes, you will need to record them so any students, living outside a 4 hour time zone or for students who might fall ill during the semester, will be able to view them. Don't forget to [publish](#) them after you record them. That doesn't happen automatically.

I am teaching a fully remote class. Do I need to do anything special?

Your setup will be similar to the spring semester. You will be remote and so will the students. You will conduct your class through Zoom and you will want to record it. For more information on using Zoom, click [here](#). If you would like to teach from one of our [teaching studios](#) instead of your office or home, please email registrar@rice.edu to request one of these rooms.

I have an in person class and I will be teaching in person. How do I setup to teach dual delivery?

The rooms have been outfitted with cameras, monitors, and microphones to pick up the faculty and the students. The above [video](#) will give you an overview of the classrooms and the quick reference guides above will give you step by step instructions on using the equipment. We encourage you to request a time to come test out the equipment in the room you will teach in by emailing teaching@rice.edu. The dual delivery method works by using Zoom to bring your remote students into your classroom and be able to interact with them.

I have an in person class but I will be teaching remote.

You will still need to setup Zoom. This is best done through your [Canvas course](#). You will need to request for a Technology TA to be present in your class to setup the equipment so your in person students can view you and the remote students. I recommend you setting up a time to test this scenario by emailing teaching@rice.edu.

We will continue to add to this FAQ. If you have other questions, please email teaching@rice.edu
