

Wine

I use Wine to run some Windows small utilities. [Here](#) shows many ways to install Wine on Mac OS X. I used a third party application named [osxwinebuilder](#). Installation was not hard. Just followed their instruction.

Fonts

If your Windows application needs Chinese or Japanese fonts, you have to install the fonts to `~/wine/drive_c/windows/Fonts`. An easy way is just making a symbol link from the OS X font folder.

```
ln -s /Library/Fonts ~/.wine/drive_c/windows
```

You can run your application from term like

```
LC_ALL=ja_JP wine abc.exe  
LC_ALL=zh_CN wine abc.exe
```
